Author/Subject Index for Volume 26 (1986)

AUTHOR INDEX

ADAMS, A.J.
Coletta, N.J. and Adams, A.J. Spatial extent of rod-cone and cone-cone interactions for flicker detection 26: 917.
Coletta, N.J. and Adams, A.J. Adaptation of a color-opponent mechanism increases parafoveal sensitivity to luminance flicker 26: 1241.

AKITA, M.
Ejima, Y., Takahashi, S. and Akita, M. Achromatic sensation for trichromatic mixture as a function of stimulus intensity 26: 1065.

ALEXANDER, K.R.
Alexander, K.R., Kelly, S.A. and Morris, M.A. Background size and saturation of the rod system 26: 299.
Alexander, K.R. and Fishman, G.A. Rod influence on cone flicker detection: variation with retinal eccentricity 26: 827.

VAN ALPHEN, G.W.H.M.
van Alphen, G.W.H.M. Choroidal stress and emmetropization 26: 723.

ALTMANN, L.
Altmann, L., Eckhorn, R. and Singer, W. Temporal integration in the visual system: influence of temporal dispersion on figure-ground discrimination 26: 1949.
Altmann, L. and Singer, W. Temporal integration in amblyopic vision 26: 1959.

ALVAREZ, R.A.
Liou, G.I., Fong, S.-L., Beattie, W.G., Cook, R.G., Leone, J., Landers, R.A., Alvarez, R.A., Wang, C., Li, Y. and Bridges, C.D.B. Bovine interstitial retinol-binding protein (IRBP)-isolation and sequence analysis of cDNA clones, characterization and in vitro translation of mRNA 26: 1645.

AMTHOR, F.R.
Amthor, F.R. and Jackson, C.A. Staining of retinal neurons in the isolated eyecup by extracellular horseradish peroxidase injection 26: 269.

ANSTIS, S.
Anstis, S. Recovering motion information from luminance 26: 147.
Cavanagh, P. and Anstis, S. Brightness shift in drifting ramp gratings isolates a transient mechanism 26: 899.
Anstis, S. and Ramachandran, V.S. Entrained path deflection in apparent motion 26: 1731.
Ramachandran, V.S. and Anstis, S. Figure-ground segregation modulates apparent motion 26: 1969.

ANTONUCCI, G.
Marzi, C.A., Antonucci, G., Pizzamiglio, L. and Santillo, C. Simultaneous binocular integration of the visual tilt effect in normal and stereoblind observers 26: 477.

APKARIAN, P
Spekreijse, H. and Apkarian, P The use of a system analysis approach to electrodiagnostic (ERG and VEP) assessment 26: 195.

APPLEBURY, M.L.
Applebury, M.L. and Hargrave, P.A. Molecular biology of the visual pigments 26: 1881.

ARDEN, G.B.
Arden, G.B., Hogg, C.R. and Carter, R.M. Uniocular recording of pattern ERG 26: 281.
Arden, G.B. and Frumkes, T.E. Stimulation of rods can increase cone flicker ERGs in man 26: 711.

ATKINSON, J.
Braddick, O.J., Atkinson, J. and Wattam-Bell, J.R. Development of discrimination of spatial phase in infancy 26: 1223.

AUERBACH, E.
Reeves, A., Peachey, N.S. and Auerbach, E. Interocular sensitization to a rod-detected test 26: 1119.

AYAMA, M.
Ayama, M. and Ikeda, M. Additivity of yellow chromatic valence 26: 763.
BADCOCK, D.R.
Derrington, A.M. and Badcock, D.R. Detection of spatial beats: non-linearity or contrast increment detection? 26: 343.
BAIER, M.
Skrandies, W. and Baier, M. The standing potential of the human eye reflects differences between upper and lower retinal areas 26: 577.
BARLOW, H.B.
Barlow, H.B. Why have multiple cortical areas? 26: 81.
BAUER, J. JR.
Shimojo, S., Bauer, J. Jr., O'Connell, K.M. and Held, R. Pre-stereoptic binocular vision in infants 26: 501.
BEATTIE, W.G.
Liou, G.I., Fong, S.-L., Beattie, W.G., Cook, R.G., Leone, J., Landers, R.A., Alvarez, R.A., Wang, C., Li, Y. and Bridges, C.D.B. Bovine interstitial retinol-binding protein (IRBP)-isolation and sequence analysis of cDNA clones, characterization and in vitro translation of mRNA 26: 1645.
BEAZLEY, L.D.
Beazley, L.D., Darby, J.E. and Perry, V.H. Cell death in the retinal ganglion cell layer during optic nerve regeneration for the frog Rana pipiens 26: 543.
BELLEVILLE, S.
Belleville, S. and Wilkinson, F. Vernier acuity in the cat: its relation to hyperacuity 26: 1263.
BENES, S.C.
Sellers, K.L., Chioran, G.M., Dain, S.J., Benes, S.C., Lubow, M., Rammohan, K. and King-Smith, P.E. Red-green mixture thresholds in congenital and acquired color defects 26: 1083.
VAN DEN BERG, A.V.
van den Berg, A.V. and Collewijn, H. Human smooth pursuit: effects of stimulus extent and of spatial and temporal constraints of the pursuit trajectory 26: 1209.
BERKLEY, M.A.
Zak, R. and Berkley, M.A. Evoked potentials elicited by brief vernier offsets: estimating vernier thresholds and properties of the neural substrate 26: 439.
BERNARD, G.D.
Goldsmith, T.H., Marks, B.C. and Bernard, G.D. Separation and identification of geometric isomers of 3-hydroxyretinoids and occurrence in the eyes of insects 26: 1763.
DE BIE, J.
de Bie, J. and van den Brink, G. A model for the slow control system during monocular fixation 26: 1129.
BIGNETTI, E.
Bignetti, E., Sorbi, R.T. and Tirindelli, R. Effect of fluoride on the phosphodiesterase of bovine photoreceptors 26: 383.
BISHOP, P.O.
Bishop, P.O. and Pettigrew, J.D. Neural mechanisms of binocular vision 26: 1587.
BISTI, S.
Bisti, S. and Carmignoto, G. Monocular deprivation in kittens differently affects crossed and uncrossed visual pathways 26: 875.
BLAKE, R.
Holopigian, K., Blake, R. and Greenwald, M.J. Selective losses in binocular vision in anisometropic amblyopes 26: 621.
VAN BLOKLAND, G.J.
van Blokland, G.J. and van Norren, D. Intensity and polarization of light scattered at small angles from the human fovea 26: 485.
van Blokland, G.J. Directionality and alignment of the foveal receptors, assessed with light scattered from the human fundus in vivo 26: 495.

BOBAK, P.
Marx, M., Bodis-Wollner, I., Bobak, P., Harnois, C., Mylin, L. and Yahr, M. Temporal frequency-dependent VEP changes in Parkinson's Disease 26: 185.

BOCK, O.
Bock, O. and Kommerell, G. Visual localization after strabismus surgery is compatible with the "outflow" theory 26: 1825.

BODIS-WOLLNER, I.
Marx, M., Bodis-Wollner, I., Bobak, P., Harnois, C., Mylin, L. and Yahr, M. Temporal frequency-dependent VEP changes in Parkinson's Disease 26: 185.

BOSSOMAIER, T.
Bossomaier, T. and Snyder A.W. Why spatial frequency processing in the visual cortex? 26: 1307.

BRADDICK, O.J.
Braddick, O.J., Atkinson, J. and Wattam-Bell, J.R. Development of discrimination of spatial phase in infancy 26: 1223.

BRADLEY, A.
Howarth, P.A. and Bradley, A. The longitudinal chromatic aberration of the human eye, and its correction 26: 362.
Bradley, A. and Ohzawa, I. A comparison of contrast detection and discrimination 26: 991.

BREITMEYER, B.G.
Breitmeyer, B.G. and Ritter, A. The role of visual pattern persistence in bistable stroboscopic motion 26: 1801.

BRESSAN, P.
Vallortigara, G., Bressan, P. and Zanforlin, M. The Saturn illusion: a new stereokinetic effect 26: 811.

BRIDGES, C.D.B.
Bridges, C.D.B. Biochemistry of vision-a perspective 26: 1317.
Liou, G.I., Fong, S.-L., Beattie, W.G., Cook, R.G., Leone, J., Landers, R.A., Alvarez, R.A., Wang, C., Li, Y. and Bridges, C.D.B. Bovine interstitial retinol-binding protein (IRBP)-isolation and sequence analysis of cDNA clones, characterization and in vitro translation of mRNA 26: 1645.

VAN DEN BRINK, G.
de Bie, J. and van den Brink, G. A model for the slow control system during monocular fixation 26: 1129.

BROWN, A.M.
Krauskopf, J., Williams, D.R., Mandler, M.B. and Brown, A.M. Higher order color mechanisms 26: 23.
Brown, A.M. Scotopic sensitivity of the two-month-old human infant 26: 707.

BUISSERET, P.
Gary-Bobo, E., Milleret, C. and Buisseret, P. Role of eye movements in developmental processes of orientation selectivity in the kitten visual cortex 26: 557.

BURKHALTER, A.
Burkhalter, A., Felleman, D.J., Newsome, W.T. and Van Essen, D.C. Anatomical and physiological asymmetries related to visual areas V3 and VP in macaque extrastriate cortex 26: 63.

BURR, D.C.
Burr, D.C., Ross, J. and Morrone, M.C. Smooth and sampled motion 26: 643.
Burr, D.C., Morrone, M.C. and Ross, J. Local and global visual processing 26: 749.

BYZOV, A.L.
Byzov, A.L. and Shura-Bura, T.M. Electrical feedback mechanism in the processing of signals in the outer plexiform layer of the retina 26: 33.

CAMPBELL, F.W.
Schlingensiepen, K.-H., Campbell, F.W., Legge, G.E. and Walker, T.D. The importance of eye movements in the analysis of simple patterns 26: 1111.

CANA, F.M.
Cana, F.M., Cuthbert, A. and Lovegrove, W. Contrast and phase processing in amblyopia 26: 781.

CARMIGNOTO, G.
Bisti, S. and Carmignoto, G. Monocular deprivation in kittens differently affects crossed and uncrossed visual pathways 26: 875.

CARTER, R.M.
Arden, G.B., Hogg, C.R. and Carter, R.M. Uniocular recording of pattern ERG 26: 281.

CASAGRANDE, V.A.
Langston, A., Casagrande, V.A. and Fox, R. Spatial resolution of the galago 26: 791.
CAVANAGH, P.
Cavanagh, P. and Anstis, S. Brightness shift in drifting ramp gratings isolates a transient mechanism 26: 899.
CHARMAN, W.N.
Tucker, J., Charman, W.N. and Ward, P.A. Modulation dependence of the accommodation response to sinusoidal gratings 26: 1693.
CHEN, B.
Hayhoe, M.M. and Chen, B. Temporal modulation sensitivity in cone dark adaptation 26: 1715.
CHIORAN, G.M.
Sellers, K.L., Chioran, G.M., Dain, S.J., Benes, S.C., Lubow, M., Rammohan, K. and King-Smith, P.E. Red-green mixture thresholds in congenital and acquired color defects 26: 1083.
COBBS, W.H.
Pugh, E.N. Jr. and Cobbs, W.H. Visual transduction in vertebrate rods and cones: a tale of two transmitters, calcium and cyclic GMP 26: 1613.

SUBJECT INDEX

ABERRATION
The longitudinal chromatic aberration of the human eye, and its correction 26: 362.
Stimuli for accommodation: blur, chromatic aberration and size 26: 957.
Computer assisted scanning laser monitor of optical quality of the excised crystalline lens 26: 1873.

ABSOLUTE THRESHOLD (SEE DETECTION THRESHOLD)

ACCOMMODATION
Dynamic interactions between accommodation and convergence are velocity sensitive 26: 927.
Stimuli for accommodation: blur, chromatic aberration and size 26: 957.
Hypermetropia in dark reared chicks and the effect of lid suture 26: 999.
Modulation dependence of the accommodation response to sinusoidal gratings 26: 1693.
Ocular accommodation in chickens: corneal vs lenticular accommodation and effect of age 26: 1865.
Natural accommodation in the growing chicken 26: 1977.

ACUITY (SEE ALSO STEREOPSIS; HYPERACUITY)
The development of visual acuity in normal fullterm and preterm infants 26: 909.
Aging and vision 26: 1507.

ADAPTATION
Background size and saturation of the rod system 26: 299.
Direction and frequency specific processing in the perception of long-range apparent movement 26: 327.
Contrast threshold elevation following continuous and interrupted adaptation 26: 673.
On neural signals that mediate brightness 26: 1195.
The search for the site of visual adaptation 26: 1417.
Adaptive changes in perceptual responses and visuomanual coordination during exposure to visual metrical distortion 26: 1783.
Adaptation and color matching 26: 1925.

ADAPTATION, CHROMATIC
Spatial and chromatic antagonism between the long- and middle-wavelength cones in the detection of long-wavelength flashes 26: 1995.

ADAPTATION, DARK
Characteristics of rod driven off-responses in cat ganglion cells 26: 835.
Interocular sensitization to a rod-detected test 26: 1119.
Temporal modulation sensitivity in cone dark adaptation 26: 1715.

ADAPTATION, LIGHT
Scotopic sensitivity of the two-month-old human infant 26: 707.
Background adaptation in human infants 26: 771.
Spatial extent of rod-cone and cone-cone interactions for flicker detection 26: 917.
Adaptation of a color-opponent mechanism increases parafoveal sensitivity to luminance flicker 26: 1241.
Perimetry of critical flicker frequency in human rod and cone vision 26: 1249.
Separation and light adaptation of rod and cone signals in the retina of the goldfish 26: 1655.

ADAPTATION, SPATIAL
Temporal aspects of spatial adaptation. A study of the tilt aftereffect 26: 661.

AFTEREFFECTS (SEE ALSO ILLUSION; PERSISTENCE)
Temporal aspects of spatial adaptation. A study of the tilt aftereffect 26: 661.
Motion after-effects in cat striate cortex elicited by moving texture 26: 1055.

AFTERIMAGE (SEE AFTEREFFECTS)

ALIGNMENT (SEE HYPERCUITY)

AMBLYOPIA
Selective losses in binocular vision in anisometropic amblyopes 26: 621.
Contrast and phase processing in amblyopia 26: 781.
A comparison of contrast detection and discrimination 26: 991.
Temporal integration in amblyopic vision 26: 1959.

BINOCULAR RIVALRY (SEE ALSO SUPPRESSION)
Pre-stereoptic binocular vision in infants 26: 501.

BINOCULAR VISION (SEE ALSO SUMMATION, BINOCULAR)
Stereo hysteresis revisited 26: 431.
Simultaneous binocular integration of the visual tilt effect in normal and stereoblind observers 26: 477.
Pre-stereoptic binocular vision in infants 26: 501.
Selective losses in binocular vision in anisometropic amblyopes 26: 621.
Binocular depth mixture: an artefact of eye vergence? 26: 1289.
Total panoramic vision in the mallard duck, Anas platyrhynchos 26: 1303.
Neural mechanisms of binocular vision 26: 1587.

BIPOLAR CELLS
Electrical feedback mechanism in the processing of signals in the outer plexiform layer of the retina 26: 33.
Three cone mechanisms in the primate electroretinogram: two with, one without off-center bipolar responses 26: 245.

BRIGHTNESS PERCEPTION
The importance of contrast for the activity of single neurons, the VEP and perception 26: 45.
Are unique and invariant hues coupled? 26: 337.
Temporal properties of brightness and color induction 26: 887.
Brightness shift in drifting ramp gratings isolates a transient mechanism 26: 899.
On neural signals that mediate brightness 26: 1195.
Increments and decrements: luminance discrimination 26: 1677.

BROCA-SULZER EFFECT (SEE BRIGHTNESS PERCEPTION)

CELLS (SEE BIPOLAR CELLS; GANGLION CELLS; HORIZONTAL CELLS; LATERAL GENICULATE NUCLEUS; CORTEX)

CHROMATIC ABERRATION (SEE ABERRATION)

CHROMATIC CONTRAST (SEE COLOR CONTRAST)

CHROMATIC INDUCTION (SEE COLOR CONTRAST)

COLOR ANOMALY
Red-green mixture thresholds in congenital and acquired color defects 26: 1083.
Eye disease and color defects 26: 1573.

COLOR APPEARANCE
Recent advances in Retinex Theory 26: 7.
Induced desensitization 26: 759.
Temporal properties of brightness and color induction 26: 887.
Achromatic sensation for trichromatic mixture as a function of stimulus intensity 26: 1065.

A comparative study of successive and simultaneous methods in colour discrimination 26: 471.
Red-green mixture thresholds in congenital and acquired color defects 26: 1083.
The physiological basis of wavelength discrimination: evidence from dichoptic and ganzfeld viewing 26: 1257.

COLOR MATCHING
Adaptation and color matching 26: 1925.

COLOR OPPONENCY
Higher order color mechanisms 26: 23.
Additivity of yellow chromatic valence 26: 763.
Neurones with strong inhibitory S-cone inputs in the macaque lateral geniculate nucleus 26: 1061.
Adaptation of a color-opponent mechanism increases parafoveal sensitivity to luminance flicker 26: 1241.
Cones and opponency 26: 1533.
Spatial and chromatic antagonism between the long- and middle-wavelength cones in the detection of long-wavelength flashes 26: 1995.

CONES
Three cone mechanisms in the primate electroretinogram: two with, one without off-center bipolar responses 26: 245.
Background size and saturation of the rod system 26: 299.
Foveal cone pigment density difference in the aging human eye 26: 321.
Horizontal cell signal is smaller with texture-like nonuniform patterns than with uniform fields of the same space-average illuminance 26: 583.
Stimulation of rods can increase cone flicker ERGs in man 26: 711.
Rod influence on cone flicker detection: variation with retinal eccentricity 26: 827.
A qualitative and quantitative analysis of the human fovea during development 26: 847.
The spectral sensitivity of blue-sensitive pigeon cones: evidence for complete screening of the visual pigment by the oil-droplets 26: 885.
Spatial extent of rod-cone and cone-cone interactions for flicker detection 26: 917.
Interocular sensitization to a rod-detected test 26: 1119.
The influence of cone adaptation upon rod mediated flicker 26: 1167.
Shared pathways for rod and cone vision 26: 1273.
Cones and opponency 26: 1533.
Visual transduction in vertebrate rods and cones: a tale of two transmitters, calcium and cyclic GMP 26: 1613.
Separation and light adaptation of rod and cone signals in the retina of the goldfish 26: 1655.
Temporal modulation sensitivity in cone dark adaptation 26: 1715.

CONTRAST DISCRIMINATION
Increments and decrements: luminance discrimination 26: 1677.

CONTRAST FLASH (SEE MASKING)

CONTRAST PERCEPTION
Reaction times to different spatial frequencies as a function of detectability 26: 745.
A comparison of contrast detection and discrimination 26: 991.

CONTRAST SENSITIVITY
The importance of contrast for the activity of single neurons, the VEP and perception 26: 45.
Recovering motion information from luminance 26: 147.
Detection of spatial beats: non-linearity or contrast increment detection? 26: 343.
Gain control mechanisms in X- and Y-type retinal ganglion cells of the cat 26: 391.
Contrast threshold elevation following continuous and interrupted adaptation 26: 673.
Local and global visual processing 26: 749.
Spatial resolution of the galago 26: 791.
Different encoding mechanisms for phase and contrast 26: 1073.
The role of cortical directional selectivity in detection of motion and flicker 26: 1187.
Shared pathways for rod and cone vision 26: 1273.

Modulation dependence of the accommodation response to sinusoidal gratings 26: 1693.
Spatio-temporal vision of macaques with severe loss of P-(beta) retinal ganglion cells 26: 1751.
Sustained and transient temporal integration functions depend on spatial frequency, not grating area 26: 1779.

CORNEA
Coloration of corneas in fish. A list of species 26: 287.
Hypermetropia in dark reared chicks and the effect of lid suture 26: 999.
Ocular accommodation in chickens: corneal vs lenticular accommodation and effect of age 26: 1865.

CORTEX
Systems analysis of spatial vision. An essay in honor of Professor L. H. van der Tweel 26: 1.
Anatomical and physiological asymmetries related to visual areas V3 and VP in macaque extrastriate cortex 26: 63.
Why have multiple cortical areas? 26: 81.
Role of eye movements in developmental processes of orientation selectivity in the kitten visual cortex 26: 557.
Monocular deprivation in kittens differently affects crossed and uncrossed visual pathways 26: 875.
Motion after-effects in cat striate cortex elicited by moving texture 26: 1055.
Why spatial frequency processing in the visual cortex? 26: 1307.
The central visual system 26: 1351.

DEPTH PERCEPTION
Optic flow 26: 161.
Tradeoffs between stereopsis and proximity luminance covariance as determinants of perceived 3D structure 26: 973.

DETECTION THRESHOLD
Induced desensitization 26: 759.

DEUTERANOPIA (SEE DICHROMACY)

DEVELOPMENT
Response properties of neurons in the lateral geniculate nucleus of neonatal kittens 26: 409.
Pre-stereoptic binocular vision in infants 26: 501.
Role of eye movements in developmental processes of orientation selectivity in the kitten visual cortex 26: 557.
Scotopic sensitivity of the two-month-old human infant 26: 707.
A qualitative and quantitative analysis of the human fovea during development 26: 847.
Monocular deprivation in kittens differently affects crossed and uncrossed visual pathways 26: 875.
The development of visual acuity in normal fullterm and preterm infants 26: 909.
Development of discrimination of spatial phase in infancy 26: 1223.
Visual development 26: 1483.

DICHROMACY
Higher order color mechanisms 26: 23.
Three cone mechanisms in the primate electroretinogram: two with, one without off-center bipolar responses 26: 245.
Spectral mechanisms and color vision in the tree shrew (Tupaia belangeri) 26: 291.

DIPLOPIA (SEE BINOCULAR VISION)

DIRECTIONAL SELECTIVITY
Intensity and polarization of light scattered at small angles from the human fovea 26: 485.
Directionality and alignment of the foveal receptors, assessed with light scattered from the human fundus in vivo 26: 495.

DISPARITY (SEE BINOCULAR VISION; STEREOPSIS)

ECCENTRICITY (SEE PERIPHERAL VISION)

ELECTRORETINOGRAM
The use of a system analysis approach to electrodiagnostic (ERG and VEP) assessment 26: 195.
Three cone mechanisms in the primate electroretinogram: two with, one without off-center bipolar responses 26: 245.
Uniocular recording of pattern ERG 26: 281.
Origin of the fast oscillation in the electroretinogram of the macaque 26: 569.
The standing potential of the human eye reflects differences between upper and lower retinal areas 26: 577.
Stimulation of rods can increase cone flicker ERGs in man 26: 711.
The spectral sensitivity of blue-sensitive pigeon cones: evidence for complete screening of the visual pigment by the oil-droplets 26: 885.
Electroretinography 26: 1443.

EVOKED POTENTIALS
Temporal frequency-dependent VEP changes in Parkinson's Disease 26: 185.
The use of a system analysis approach to electrodiagnostic (ERG and VEP) assessment 26: 195.
Evoked potentials elicited by brief vernier offsets: estimating vernier thresholds and properties of the neural substrate 26: 439.
A visual evoked potential study of metacontrast masking 26: 631.
Monocular deprivation in kittens differently affects crossed and uncrossed visual pathways 26: 875.
Evoked potentials in vision research 1961-86 26: 1461.
Visual evoked potentials to luminance and chromatic contrast in rhesus monkeys 26: 1897.
The relationship between log-complex transforms of stimuli and the cortical responses they evoke 26: 1909.

EYE-MOVEMENTS
The systems approach to the oculomotor system 26: 91.
The need for an eclectic, rather than systems, approach to the study of the primate oculomotor system 26: 101.
Role of eye movements in developmental processes of orientation selectivity in the kitten visual cortex 26: 557.
The importance of eye movements in the analysis of simple patterns 26: 1111.
A model for the slow control system during monocular fixation 26: 1129.
Total panoramic vision in the mallard duck, Anas platyrhynchos 26: 1303.
Non-conjugate monocular optokinetic nystagmus in cats 26: 1311.
Eye movement 26: 1389.

EYE-MOVEMENTS, OPTOKINETIC NYSTAGMUS
Optokinetic response and visual suppression of the vestibulo-ocular reflex in the open loop condition in the cat 26: 653.
Optokinetic nystagmus: the effects of stationary edges, alone and in combination with central occlusion 26: 1155.
Non-conjugate monocular optokinetic nystagmus in cats 26: 1311.

EYE-MOVEMENTS, SACCADIC
The need for an eclectic, rather than systems, approach to the study of the primate oculomotor system 26: 101.
Saccadic undershoot is not inevitable: saccades can be accurate 26: 735.
Visuomotor fields of the superior colliculus: a quantitative model 26: 857.
The aftermath of horizontal saccades: saccadic retraction and cyclotorsion 26: 1807.
Dependence of visual suppression on the amplitudes of saccades and blinks 26: 1815.

EYE-MOVEMENTS, SMOOTH PURSUIT
The need for an eclectic, rather than systems, approach to the study of the primate oculomotor system 26: 101.
Smooth-pursuit initiation in the presence of a textured background in monkey 26: 943.
A model for the slow control system during monocular fixation 26: 1129.
Optokinetic nystagmus: the effects of stationary edges, alone and in combination with central occlusion 26: 1155.
Human smooth pursuit: effects of stimulus extent and of spatial and temporal constraints of the pursuit trajectory 26: 1209.

EYE-MOVEMENTS, VERGENCE
Dynamic interactions between accommodation and convergence are velocity sensitive 26: 927.
Binocular depth mixture: an artefact of eye vergence? 26: 1289.

EYE-MOVEMENTS, VESTIBULO-OCULAR
The systems approach to the oculomotor system 26: 91.
The need for an eclectic, rather than systems, approach to the study of the primate oculomotor system 26: 101.
Optokinetic response and visual suppression of the vestibulo-ocular reflex in the open loop condition in the cat 26: 653.

FLICKER
Stimulation of rods can increase cone flicker ERGs in man 26: 711.
Rod influence on cone flicker detection: variation with retinal eccentricity 26: 827.
Spatial extent of rod-cone and cone-cone interactions for flicker detection 26: 917.
The influence of cone adaptation upon rod mediated flicker 26: 1167.
Adaptation of a color-opponent mechanism increases parafoveal sensitivity to luminance flicker 26: 1241.
Perimetry of critical flicker frequency in human rod and cone vision 26: 1249.
The perception of moving stimuli: a model of spatiotemporal coding in human vision 26: 1281.
Temporal modulation sensitivity in cone dark adaptation 26: 1715.

FOVEA
Foveal cone pigment density difference in the aging human eye 26: 321.
A qualitative and quantitative analysis of the human fovea during development 26: 847.

GANGLION CELLS
Staining of retinal neurons in the isolated eyecup by extracellular horseradish peroxidase injection 26: 269.
Specific labelling of ganglion cells in the cat retina by a monoclonal antibody 26: 373.
Gain control mechanisms in X- and Y-type retinal ganglion cells of the cat 26: 391.
Cell death in the retinal ganglion cell layer during optic nerve regeneration for the frog Rana pipiens 26: 543.
Characteristics of rod driven off-responses in cat ganglion cells 26: 835.
Spatial displacement sensitivity of X- and Y-cells in the dorsal lateral geniculate nucleus of the cat 26: 1027.
Visual response latency of X- and Y-cells in the dorsal lateral geniculate nucleus of the cat 26: 1041.
Photoreceptor input and temporal summation in turtle retinal ganglion cells 26: 1667.
Spatio-temporal vision of macaques with severe loss of P-(beta) retinal ganglion cells 26: 1751.

GRATINGS
Smooth and sampled motion 26: 643.
Contrast threshold elevation following continuous and interrupted adaptation 26: 673.
Local and global visual processing 26: 749.
Spatial resolution of the galago 26: 791.
Matching velocity in central and peripheral vision 26: 1099.
Widely separated spatial frequencies: mechanism interactions 26: 1143.
Sustained and transient temporal integration functions depend on spatial frequency, not grating area 26: 1779.

HORIZONTAL CELLS
Electrical feedback mechanism in the processing of signals in the outer plexiform layer of the retina 26: 33.
The effects of continuous superfusion of L-aspartate and L-glutamate on horizontal cells of the turtle retina 26: 259.
Horizontal cell signal is smaller with texture-like nonuniform patterns than with uniform fields of the same space-average illuminance 26: 583.
Retrospective review of retinal circuitry 26: 1339.

HYPERACUITY
Areas of spatial interaction for a hyperacuity stimulus 26: 349.
Evoked potentials elicited by brief vernier offsets: estimating vernier thresholds and properties of the neural substrate 26: 439.
Responses of spatial mechanisms can explain hyperacuity 26: 453.
Irradiation: implications for theories of edge localization 26: 1007.
Vernier acuity in the cat: its relation to hyperacuity 26: 1263.

ILLUSION (SEE ALSO AFTEREFFECTS)
The rotating Pulfrich effect, and a new method of determining visual latency differences 26: 367.
Brightness shift in drifting ramp gratings isolates a transient mechanism 26: 899.
Binocular depth mixture: an artefact of eye vergence? 26: 1289.

IMAGE QUALITY
Systems analysis of spatial vision. An essay in honor of Professor L. H. van der Tweel 26: 1.
Intensity and polarization of light scattered at small angles from the human fovea 26: 485.
Directionality and alignment of the foveal receptors, assessed with light scattered from the human fundus in vivo 26: 495.
Aging and vision 26: 1507.
Physiological optics during the first quarter century of Vision Research 26: 1515.

INCREMENT THRESHOLD
Detection of spatial beats: non-linearity or contrast increment detection? 26: 343.
Background adaptation in human infants 26: 771.
Increment spectral sensitivities for spatial periodic grating patterns: evidence for variable tuning of the chromatic system 26: 1851.

INTEROCULAR TRANSFER (SEE AFTEREFFECTS)

LATENCY
The rotating Pulfrich effect, and a new method of determining visual latency differences 26: 367.
Saccadic undershoot is not inevitable: saccades can be accurate 26: 735.
Reaction times to different spatial frequencies as a function of detectability 26: 745.
Background adaptation in human infants 26: 771.
The relation between sensitivity changes and response time scale in the barnacle photoreceptor 26: 819.
Visual response latency of X- and Y-cells in the dorsal lateral geniculate nucleus of the cat 26: 1041.

LATERAL GENICULATE NUCLEUS
Response properties of neurons in the lateral geniculate nucleus of neonatal kittens 26: 409.
Spatial displacement sensitivity of X- and Y-cells in the dorsal lateral geniculate nucleus of the cat 26: 1027.
Visual response latency of X- and Y-cells in the dorsal lateral geniculate nucleus of the cat 26: 1041.
Neurones with strong inhibitory S-cone inputs in the macaque lateral geniculate nucleus 26: 1061.
The central visual system 26: 1351.

LENS
Ocular accommodation in chickens: corneal vs lenticular accommodation and effect of age 26: 1865.
Computer assisted scanning laser monitor of optical quality of the excised crystalline lens 26: 1873.

LIGHT DAMAGE
Development and degeneration of retina in rds mutant mice: effects of light on the rate of degeneration in albino and pigmented homozygous and heterozygous mutant and normal mice 26: 1177.

LUMINANCE
Recovering motion information from luminance 26: 147.
Tradeoffs between stereopsis and proximity luminance covariance as determinants of perceived 3D structure 26: 973.
Increments and decrements: luminance discrimination 26: 1677.
Visual evoked potentials to luminance and chromatic contrast in rhesus monkeys 26: 1897.

MASKING
A visual evoked potential study of metacontrast masking 26: 631.

McCOLLOUGH EFFECT (SEE AFTEREFFECTS)

METACONTRAST (SEE MASKING)

MONOCULAR VISION
The distribution of human motion detector properties in the monocular visual field 26: 797.

MORPHOLOGY (SEE NEUROANATOMY)

MOVEMENT PERCEPTION
Processing of optical information by the visual system of the fly 26: 113.
Visual processing of four kinds of relative motion 26: 127.
Recovering motion information from luminance 26: 147.
Optic flow 26: 161.
Visual motion ambiguity 26: 181.
Direction and frequency specific processing in the perception of long-range apparent movement 26: 327.
What determines correspondence strength in apparent motion? 26: 599.
Precise velocity discrimination despite random variations in temporal frequency and contrast 26: 609.
Smooth and sampled motion 26: 643.
The distribution of human motion detector properties in the monocular visual field 26: 797.
The Saturn illusion: a new stereokinetic effect 26: 811.
Visuomotor fields of the superior colliculus: a quantitative model 26: 857.
Dynamic interactions between accommodation and convergence are velocity sensitive 26: 927.
Smooth-pursuit initiation in the presence of a textured background in monkey 26: 943.
Matching velocity in central and peripheral vision 26: 1099.
The role of cortical directional selectivity in detection of motion and flicker 26: 1187.
The perception of moving stimuli: a model of spatiotemporal coding in human vision 26: 1281.
Apparent motion occurs only between similar spatial frequencies 26: 1727.
Entrained path deflection in apparent motion 26: 1731.
Perception of illusory occlusion in apparent motion 26: 1741.
The role of visual pattern persistence in bistable stroboscopic motion 26: 1801.
Velocity discrimination in the cat 26: 1835.
Mechanisms of displacement discrimination with a visual reference 26: 1939.
Figure-ground segregation modulates apparent motion 26: 1969.

NEUROANATOMY
Staining of retinal neurons in the isolated eyecup by extracellular horseradish peroxidase injection 26: 269.
Cell death in the retinal ganglion cell layer during optic nerve regeneration for the frog Rana pipiens 26: 543.
A qualitative and quantitative analysis of the human fovea during development 26: 847.

NEUROCHEMISTRY
Neurochemical stratification in the inner plexiform layer of the vertebrate retina 26: 223.
The effects of continuous superfusion of L-aspartate and L-glutamate on horizontal cells of the turtle retina 26: 259.

NEUROTRANSMITTER (SEE NEUROCHEMISTRY)

XXX

OCULAR DIMENSIONS
Choroidal stress and emmetropization 26: 723.
Natural accommodation in the growing chicken 26: 1977.

OPTIC TECTUM
Visuomotor fields of the superior colliculus: a quantitative model 26: 857.
The central visual system 26: 1351.

ORIENTATION PERCEPTION
Processing of optical information by the visual system of the fly 26: 113.
Simultaneous binocular integration of the visual tilt effect in normal and stereoblind observers 26: 477.
Temporal aspects of spatial adaptation. A study of the tilt aftereffect 26: 661.
Periodicity in orientation discrimination and the unconfounding of visual information 26: 1299.

PATHOLOGY
Red-green mixture thresholds in congenital and acquired color defects 26: 1083.
Development and degeneration of retina in rds mutant mice: effects of light on the rate of degeneration in albino and pigmented homozygous and heterozygous mutant and normal mice 26: 1177.
Aging and vision 26: 1507.
Eye disease and color defects 26: 1573.
The Myopic eye of the Black Moor goldfish 26: 1831.

PERIPHERAL VISION
The distribution of human motion detector properties in the monocular visual field 26: 797.
Rod influence on cone flicker detection: variation with retinal eccentricity 26: 827.
A comparison of contrast detection and discrimination 26: 991.
Matching velocity in central and peripheral vision 26: 1099.
Perimetry of critical flicker frequency in human rod and cone vision 26: 1249.

PERSISTENCE (SEE ALSO AFTEREFFECTS)
The role of visual pattern persistence in bistable stroboscopic motion 26: 1801.
Temporal integration in the visual system: influence of temporal dispersion on figure-ground discrimination 26: 1949.
Temporal integration in amblyopic vision 26: 1959.

PHASE SENSITIVITY
Contrast and phase processing in amblyopia 26: 781.
Different encoding mechanisms for phase and contrast 26: 1073.
Development of discrimination of spatial phase in infancy 26: 1223.

PHOTOCHEMISTRY
A fly, Drosophila melanogaster, forms 11-cis 3-hydroxyretinal in the dark 26: 255.
3-Dehydroretinal in the eye of a bioluminescent squid, Watasenia scintillans 26: 275.
Effect of fluoride on the phosphodiesterase of bovine photoreceptors 26: 383.
Immunochemical study of the cyclic nucleotide system of retinal photoreceptor membranes: antibodies raised to phosphodiesterase, its protein inhibitor and GTP-binding proteins 26: 415.
The effects of HEPES, bicarbonate and calcium on the cGMP content of vertebrate rod photoreceptors and the isolated electrophysiological effects of cGMP and calcium 26: 521.
Light induced sodium dependent accumulation of calcium and potassium in the extracellular space of bee retina 26: 679.
Biochemistry of vision-a perspective 26: 1317.
Visual transduction in vertebrate rods and cones: a tale of two transmitters, calcium and cyclic GMP 26: 1613.
Bovine interstitial retinol-binding protein (IRBP)-isolation and sequence analysis of cDNA clones, characterization and in vitro translation of mRNA 26: 1645.
Molecular biology of the visual pigments 26: 1881.

PHOTOPIGMENTS
Photoreceptor redox state monitored in vivo by transmission and fluorescence microspectrophotometry in blowfly compound eyes 26: 239.
A fly, Drosophila melanogaster, forms 11-cis 3-hydroxyretinal in the dark 26: 255.
3-Dehydroretinal in the eye of a bioluminescent squid, Watasenia scintillans 26: 275.
Spectral reflectance of the human eye 26: 313.
Foveal cone pigment density difference in the aging human eye 26: 321.
A simple procedure for the extraction of the native chromophore of visual pigments: the formaldehyde method 26: 425.
Rhodopsin and retinochrome in the retina of a marine gastropod, Conomulex luhuanus 26: 691.
Biochemistry of vision-a perspective 26: 1317.
A unifying presentation of photopigment spectra 26: 1543.
Separation and identification of geometric isomers of 3-hydroxyretinoids and occurrence in the eyes of insects 26: 1763.
Does retinol serve a sensitizing function in insect photoreceptors? 26: 1771.
Molecular biology of the visual pigments 26: 1881.

PHOTORECEPTORS (SEE ALSO CONES; RODS)
Photoreceptor redox state monitored in vivo by transmission and fluorescence microspectrophotometry in blowfly compound eyes 26: 239.
Effect of fluoride on the phosphodiesterase of bovine photoreceptors 26: 383.
Immunochemical study of the cyclic nucleotide system of retinal photoreceptor membranes: antibodies raised to phosphodiesterase, its protein inhibitor and GTP-binding proteins 26: 415.
The effects of HEPES, bicarbonate and calcium on the cGMP content of vertebrate rod photoreceptors and the isolated electrophysiological effects of cGMP and calcium 26: 521.
Spread of the light response along the rod outer segment: an estimate from patch-clamp recordings 26: 535.
Horizontal cell signal is smaller with texture-like nonuniform patterns than with uniform fields of the same space-average illuminance 26: 583.
Light induced sodium dependent accumulation of calcium and potassium in the extracellular space of bee retina 26: 679.
The relation between sensitivity changes and response time scale in the barnacle photoreceptor 26: 819.
Spectral sensitivity of blowfly photoreceptors: dependence on wave-guide effects and pigment concentration 26: 1019.
Development and degeneration of retina in rds mutant mice: effects of light on the rate of degeneration in albino and pigmented homozygous and heterozygous mutant and normal mice 26: 1177.
Spectral sensitivity, intense spectral light studies, and the color receptor mosaic of primates 26: 1557.
Separation and light adaptation of rod and cone signals in the retina of the goldfish 26: 1655.
Does retinol serve a sensitizing function in insect photoreceptors? 26: 1771.

PIGMENT EPITHELIUM
Origin of the fast oscillation in the electroretinogram of the macaque 26: 569.
The standing potential of the human eye reflects differences between upper and lower retinal areas 26: 577.

POLARIZED LIGHT
Intensity and polarization of light scattered at small angles from the human fovea 26: 485.

PROTANOPIA (SEE DICHROMACY)

PUPILS
On the gekko pupil and Scheiner's disc 26: 815.

RECEPTIVE FIELDS (SEE ALSO INDIVIDUAL CELL TYPES)
Gain control mechanisms in X- and Y-type retinal ganglion cells of the cat 26: 391.

Response properties of neurons in the lateral geniculate nucleus of neonatal kittens 26: 409.
Characteristics of rod driven off-responses in cat ganglion cells 26: 835.
Spatial and chromatic antagonism between the long- and middle-wavelength cones in the detection of long-wavelength flashes 26: 1995.

RECEPTOR POTENTIAL (SEE CONES; ELECTRORETINOGRAM; PHOTORECEPTORS; RODS)

REFRACTION
The longitudinal chromatic aberration of the human eye, and its correction 26: 362.
Choroidal stress and emmetropization 26: 723.
Hypermetropia in dark reared chicks and the effect of lid suture 26: 999.
The Myopic eye of the Black Moor goldfish 26: 1831.

RETINAL DISEASE (SEE PATHOLOGY)

ROD-CONE INTERACTION (SEE CONES; RODS)

RODS
Three cone mechanisms in the primate electroretinogram: two with, one without off-center bipolar responses 26: 245.
Background size and saturation of the rod system 26: 299.
Effect of fluoride on the phosphodiesterase of bovine photoreceptors 26: 383.
Spread of the light response along the rod outer segment: an estimate from patch-clamp recordings 26: 535.
Scotopic sensitivity of the two-month-old human infant 26: 707.
Stimulation of rods can increase cone flicker ERGs in man 26: 711.
Background adaptation in human infants 26: 771.
Rod influence on cone flicker detection: variation with retinal eccentricity 26: 827.
Characteristics of rod driven off-responses in cat ganglion cells 26: 835.
Spatial extent of rod-cone and cone-cone interactions for flicker detection 26: 917.
Interocular sensitization to a rod-detected test 26: 1119.
The influence of cone adaptation upon rod mediated flicker 26: 1167.
Shared pathways for rod and cone vision 26: 1273.
Visual transduction in vertebrate rods and cones: a tale of two transmitters, calcium and cyclic GMP 26: 1613.
Separation and light adaptation of rod and cone signals in the retina of the goldfish 26: 1655.

SACCADES (SEE EYE-MOVEMENTS, SACCADIC)

SACCADIC SUPPRESSION (SEE SUPPRESSION)

SATURATION
Background size and saturation of the rod system 26: 299.

SCHEMATIC EYE (SEE OCULAR DIMENSIONS)

SCOTOPIC VISION
Background adaptation in human infants 26: 771.

SPATIAL FREQUENCY
Detection of spatial beats: non-linearity or contrast increment detection? 26: 343.
Temporal integration characteristics in spatial frequency identification 26: 511.
What determines correspondence strength in apparent motion? 26: 599.
Precise velocity discrimination despite random variations in temporal frequency and contrast 26: 609.
Reaction times to different spatial frequencies as a function of detectability 26: 745.
Contrast and phase processing in amblyopia 26: 781.
Monocular deprivation in kittens differently affects crossed and uncrossed visual pathways 26: 875.
A comparison of contrast detection and discrimination 26: 991.
Spatial displacement sensitivity of X- and Y-cells in the dorsal lateral geniculate nucleus of the cat 26: 1027.
Visual response latency of X- and Y-cells in the dorsal lateral geniculate nucleus of the cat 26: 1041.

Widely separated spatial frequencies: mechanism interactions 26: 1143.
Why spatial frequency processing in the visual cortex? 26: 1307.
Modulation dependence of the accommodation response to sinusoidal gratings 26: 1693.
Apparent motion occurs only between similar spatial frequencies 26: 1727.
The Munsterberg figure and twisted cords 26: 1793.
Increment spectral sensitivities for spatial periodic grating patterns: evidence for variable tuning of the chromatic system 26: 1851.

SPATIAL VISION (SEE ALSO ACUITY)
Systems analysis of spatial vision. An essay in honor of Professor L. H. van der Tweel 26: 1.
Spatial resolution of the galago 26: 791.
Brightness shift in drifting ramp gratings isolates a transient mechanism 26: 899.
The importance of eye movements in the analysis of simple patterns 26: 1111.
Development of discrimination of spatial phase in infancy 26: 1223.
Shared pathways for rod and cone vision 26: 1273.
Physiological optics during the first quarter century of Vision Research 26: 1515.
Spatial vision then and now 26: 1523.
The Munsterberg figure and twisted cords 26: 1793.

SPECTRAL SENSITIVITY
Spectral mechanisms and color vision in the tree shrew (Tupaia belangeri) 26: 291.
Are unique and invariant hues coupled? 26: 337.
Characteristics of rod driven off-responses in cat ganglion cells 26: 835.
The spectral sensitivity of blue-sensitive pigeon cones: evidence for complete screening of the visual pigment by the oil-droplets 26: 885.
Spectral sensitivity of blowfly photoreceptors: dependence on wave-guide effects and pigment concentration 26: 1019.
A unifying presentation of photopigment spectra 26: 1543.
Spectral sensitivity, intense spectral light studies, and the color receptor mosaic of primates 26: 1557.
Does retinol serve a sensitizing function in insect photoreceptors? 26: 1771.
Increment spectral sensitivities for spatial periodic grating patterns: evidence for variable tuning of the chromatic system 26: 1851.

SPHERICAL ABERRATION (SEE ABERRATION)

STABILIZED VISION
Stereo hysteresis revisited 26: 431.

STEREOPSIS
Visual processing of four kinds of relative motion 26: 127.
Stereo hysteresis revisited 26: 431.
Simultaneous binocular integration of the visual tilt effect in normal and stereoblind observers 26: 477.
Pre-stereoptic binocular vision in infants 26: 501.
An ambiguous random-dot stereogram which permits continuous change of interpretation 26: 517.
Selective losses in binocular vision in anisometropic amblyopes 26: 621.
Tradeoffs between stereopsis and proximity luminance covariance as determinants of perceived 3D structure 26: 973.
Binocular depth mixture: an artefact of eye vergence? 26: 1289.
Neural mechanisms of binocular vision 26: 1587.
Stereoscopic vision 26: 1601.

STILES-CRAWFORD EFFECT (SEE DIRECTIONAL SELECTIVITY)

STRABISMUS (SEE ALSO AMBLYOPIA)
Visual localization after strabismus surgery is compatible with the "outflow" theory 26: 1825.

SUMMATION, BINOCULAR
Selective losses in binocular vision in anisometropic amblyopes 26: 621.

SUMMATION, PROBABILITY
Sustained and transient temporal integration functions depend on spatial frequency, not grating area 26: 1779.

SUMMATION, SPATIAL
Horizontal cell signal is smaller with texture-like nonuniform patterns than with uniform fields of the same space-average illuminance 26: 583.

SUMMATION, TEMPORAL
Temporal impulse response 26: 1431.
Photoreceptor input and temporal summation in turtle retinal ganglion cells 26: 1667.
Temporal integration in the visual system: influence of temporal dispersion on figure-ground discrimination 26: 1949.
Temporal integration in amblyopic vision 26: 1959.

SUPERIOR COLLICULUS (SEE OPTIC TECTUM)

SUPPRESSION (SEE ALSO BINOCULAR RIVALRY)
Optokinetic response and visual suppression of the vestibulo-ocular reflex in the open loop condition in the cat 26: 653.
Human visual suppression 26: 1401.
Dependence of visual suppression on the amplitudes of saccades and blinks 26: 1815.

TECHNIQUES
An ambiguous random-dot stereogram which permits continuous change of interpretation 26: 517.
Computer assisted scanning laser monitor of optical quality of the excised crystalline lens 26: 1873.
Natural accommodation in the growing chicken 26: 1977.

TEXTURE PERCEPTION
Smooth-pursuit initiation in the presence of a textured background in monkey 26: 943.
Motion after-effects in cat striate cortex elicited by moving texture 26: 1055.
Figure-ground segregation modulates apparent motion 26: 1969.

THRESHOLD (SEE CONTRAST SENSITIVITY; DETECTION THRESHOLD; INCREMENT THRESHOLD)

TRITANOPIA (SEE DICHROMACY)

VELOCITY (SEE MOVEMENT PERCEPTION)

VERNIER ACUITY (SEE HYPERACUITY)

VISUAL DIRECTION
The rhino-optical phenomenon: ocular parallax and the visible field beyond the nose 26: 1163.
Sighting dominance and egocentric localization 26: 1709.
Visual localization after strabismus surgery is compatible with the "outflow" theory 26: 1825.

WAVELENGTH DISCRIMINATION (SEE COLOR DISCRIMINATION)
